macro/table-filter/ the existing table, or some other macros, the results of whose work are the table. Macro body is

Confluence Table Filter Plugin Edit

Confluence Table Filter plugin allows to filter the data presented in tables. Data filtration can be applied to several fields at the same time. To do this you must specify to the plugin the names of the fields and that's all. The list of possible values for filtration is taken from the table itself, there is no need for you to specify them manually.

Installation Edit

The plugin is a jar-archive. To install the plugin successfully one must do the following:

1. [Download the plugin.](#)
2. Go to page 'Administrator' in Confluence, click the link 'Plugins'.
3. Click 'Choose file', after that choose the necessary jar-archive.
4. Click 'Upload', after which the plugin will be automatically installed.

Usage Edit

This Confluence plugin consists of one macro `{table-filter}`. To process the table data one should specify as the body of macro `{table-filter}` the existing table, or some other macro, the results of whose work are the table. Macro body is obligatory. The parameters of `{table-filter}` are listed in the following table:
